

LUXURY ART S.A.R.L.
GLASS WARE & PORCELAIN WARE FACTORY

PROCESSING OF CLAY FOR PORCELAIN WARE AT LUXURY ART FACTORY

Storage of the material clay , felspar, silica in Luxury art factory

Mixing the clay with some other chemical

**Filitering the sand away by washing with water after crashing.
This process is also to remove improperly sized materials.**

After mixing, it will be put inside the pond for washing + mixing

Magnetic filtration is then used to remove iron from the slurries, as these watery mixtures of insoluble material are called. Because iron occurs so pervasively in most clays and will impart an undesirable reddish hue to the body if it oxidized.

The clay will be absorbed from the above pond and forming with the pressing machine into round biscuit. It is under condition that the water is almost dry up.

From the round biscuit it will be put into another pressing machine in purpose of pressing out the air and forming into the bar condition.

The dry and round bar will store in the warehouse then send to the porcelain factory for processing the forming.
